

Seminar: Neuro-cognitive models for reasoning and memory

Organizer: Marco Ragni

Assistant: Julia Wertheim

Blockseminary: 06.02.2017 – 07.02.2017 09:00-16:00 at Technical Faculty

First meeting (assignment of topics): **24.10.2016 16:00** at Technical Faculty

Rooms: Can be soon found under www.cc.uni-freiburg.de/teaching

Objective: This seminar gives a technical introduction to basic techniques for stochastic and computational modeling of cognitive processes. We will work through the book by

Michael D. Lee and Eric-Jan Wagenmakers (2013):

Bayesian Cognitive Modeling: A Practical Course

Cambridge University Press

The first two parts of the book can be found online:

https://webfiles.uci.edu/mdlee/LeeWagenmakers2013_Free.pdf

Background knowledge: You should have a basic understanding of (or read about):

1. Probability distribution (e.g., to be found in the book above)
2. Graph structures (some basics)
3. Working memory, e.g., http://www.scholarpedia.org/article/Working_memory

Requirements:

(1) Read the first two chapters above

(2) Present your selected topic

- a. each student needs to present at least 30 Minutes + 5-10 Minutes questions):** Teach all other participants methods and fundamental knowledge for one of the topics below. Select the material and be as instructive as possible
- b. Present the respective code and cognitive model in your talk**
(Code can be found here: <http://bayesmodels.com/>)

(3) Write a short summary/tutorial of the papers and the model

(2-3 pages, about 2500 words: What is the result? Can there be improvements? Are there any specifics worth mentioning? etc.)

(4) Send everything no later than January 17, 2017 to

Julia Wertheim <ju.wertheim@googlemail.com>
